

Adam Kliegman

Software Engineer - Design Systems • Frontend Architecture • Accessibility • AI Products

adam.j.kliegman@gmail.com • adamkliegman.com • +1 (516) 457-2014 • NYC Area

Summary

I'm a full-stack engineer who lives on the frontend and cares most about design systems, with more than 13 years across engineering, product leadership, and UX spent building the shared foundations other engineers ship on.

Experience

MagicSchool AI • EdTech • 8M+ active users • \$45M Series B • B2B/B2C

Senior Software Engineer • Jan 2025 to Present

- Founded Spellbook, the design system for an AI-native platform serving 8M+ educators: 86 components, semantic tokens, and documented guidance at 100% adoption across 50 engineers, with redundant UI code cut by half.
- Lead the cross-functional design-system guild across engineers and designers, setting governance, the contribution model, documentation standards, and the roadmap, and reviewing product teams' contributions.
- Architect the token layer as DTCG primitives and semantic aliases, with light and dark values required for every color and the theme generated behind a build-failing freshness check, so surfaces ship in both modes.
- Led the migration off a fragmented Material UI codebase onto ShadCN, Radix UI, Tailwind CSS 4, and Storybook, sequencing the rollout across teams and retiring the legacy stack without pausing feature delivery.
- Drive accessibility architecture to an exceptional VPAT, gating every component merge on an accessibility assertion and covering what automated checks miss: 400% zoom reflow, focus, and screen-reader semantics.
- Contributed to the MCP server that exposes the system's components, tokens, and usage validation to coding agents, and architect AI product surfaces with streaming responses, structured outputs, and human review.

RubyLaw • Legal MarTech SaaS • 20 of the 50 Largest U.S. Law Firms • B2B2C

Software Engineer III • Jul 2023 to Jul 2024

- Engineered a Figma-based design system, reusable React component library, starter toolkit, document-generation system, and content-management integrations for the platform's law-firm clients.
- Translated sophisticated brand systems into reusable component APIs and built polished, WCAG-compliant websites, blogs, intranets, and extranets on a shared component architecture.

Demyst Data • FinTech SaaS • Acquired by Feedzai (2025) • B2B

Director of Product Management, Senior Product Manager • Oct 2019 to Jan 2023

- Architected and personally engineered the customer platform frontend while managing a globally distributed team of eight, and led Demyst's transformation into an API-first SaaS platform for self-service data.
- Built an atomic design system used across the company's products and led the site rebuild that doubled inbound leads.

Noodle • EdTech • Founded by John Katzman (Princeton Review, 2U) • B2B2C/B2C

Sr. Product Manager, Lead Product Engineer, UX/UI Engineer • Oct 2014 to Mar 2019

- Designed and engineered an end-to-end tutoring marketplace and operations platform spanning discovery, enrollment, scheduling, instruction, communication, and administration.
- Helped double year-over-year revenue to more than \$2 million and cut the average sales cycle in half.

Earlier Experience

- **Frontend Developer, Shoplet** • 2013 to 2014: led UI for an eCommerce brand refresh serving 20,000 daily visitors.
- **Business Analyst, Tigerspike** • 2012 to 2013: Fortune 100 client strategy, helping secure \$5M+ in new business.

Skills

Design Systems and Frontend: Component APIs, Design Tokens, Storybook, Figma, TypeScript, React, WCAG 2.2 AA

AI and Platform: Anthropic and OpenAI APIs, Vercel AI SDK, MCP, Evals, Node.js, PostgreSQL, Supabase, CI/CD

Education

University of Wisconsin–Madison: B.S. in Psychology, 2009 • **SVPG:** Product Leaders Academy, 2020
